

## Practice questions – Year 4 – Number families

1.  $6 \times \underline{\quad} = 42$  so  $60 \times \underline{\quad} = 420$  (number families)
2.  $\underline{\quad} \times 9 = 63$  so  $\underline{\quad} \times 9000 = 630,000$  (number families)
3.  $5 \times \underline{\quad} = 30$  so  $50 \times \underline{\quad} = 3,000$  (number families)
4.  $7 \times \underline{\quad} = 49$  so  $70 \times \underline{\quad} = 4,900$  (number families)
5.  $8 \times \underline{\quad} = 40$  so  $800 \times \underline{\quad} = 4,000$  (number families)
6.  $\underline{\quad} \times 12 = 96$  so  $\underline{\quad} \times 1,200 = 9,600$  (number families)
7.  $11 \times \underline{\quad} = 77$  so  $110 \times \underline{\quad} = 770$  (number families)
8.  $10 \times \underline{\quad} = 90$  so  $1,000 \times \underline{\quad} = 9,000$  (number families)

## Practice question answers – Year 4 – Number families

1.  $6 \times 7 = 42$  so  $60 \times 7 = 420$  (number families)
2.  $7 \times 9 = 63$  so  $700 \times 9,000 = 630,000$  (number families)
3.  $5 \times 6 = 30$  so  $50 \times 60 = 3,000$  (number families)
4.  $7 \times 7 = 49$  so  $70 \times 70 = 4,900$  (number families)
5.  $8 \times 5 = 40$  so  $800 \times 5 = 4,000$  (number families)
6.  $12 \times 8 = 96$  so  $1,200 \times 8 = 9,600$  (number families)
7.  $11 \times 7 = 77$  so  $110 \times 7 = 770$  (number families)
8.  $10 \times 9 = 90$  so  $1,000 \times 9 = 9,000$  (number families)
