

Practice questions – Year 5 and 6 – Number families

1. $3 \times \underline{\quad} = 21$ so $30 \times \underline{\quad} = 21,000$ (number families)
2. $4 \times \underline{\quad} = 24$ so $400 \times \underline{\quad} = 24,000$ (number families)
3. $6 \times \underline{\quad} = 42$ so $60 \times \underline{\quad} = 420$ (number families)
4. $\underline{\quad} \times 9 = 63$ so $\underline{\quad} \times 9000 = 630,000$ (number families)
5. $21 \div \underline{\quad} = 3$ so $21,000 \div \underline{\quad} = 300$ (number families)
6. $24 \div \underline{\quad} = 4$ so $2,400 \div \underline{\quad} = 40$ (number families)
7. $42 \div \underline{\quad} = 6$ so $4,200 \div \underline{\quad} = 600$ (number families)
8. $63 \div \underline{\quad} = 7$ so $630,000 \div \underline{\quad} = 90,000$ (number families)

Practice question answers – Year 5 and 6 – Number families

1. $3 \times 7 = 21$ so $30 \times 700 = 21,000$ (number families)
2. $4 \times 6 = 24$ so $400 \times 60 = 24,000$ (number families)
3. $6 \times 7 = 42$ so $60 \times 7 = 420$ (number families)
4. $7 \times 9 = 63$ so $700 \times 9,000 = 630,000$ (number families)
5. $21 \div 7 = 3$ so $21,000 \div 70 = 300$ (number families)
6. $24 \div 6 = 4$ so $2,400 \div 60 = 40$ (number families)
7. $42 \div 7 = 6$ so $4,200 \div 7 = 600$ (number families)
8. $63 \div 9 = 7$ so $630,000 \div 7,000 = 90,000$ (number families)
